AMENDMENTS TO THE SPECIFICATION:

Page 14, replace the paragraph beginning on line 12 with the following amended paragraph:

--Under the circumstances, let the first conference room terminal 1 send a call to the ANS 5 through a signaling channel 15s and establish a connection 15. After establishment of the connection 15s, the first conference room terminal 1 sends a room name of the second conference room terminal 2 to the ANS 5 through the connection 15. Responsive to the room name, the ANS 5 searches or looks up the address database 5a by using the room name as a key. In this event, an AESA which is assigned to the second conference room terminal 2 is obtained as a result of the search and is sent back as an ANS response (depicted by 152 in Fig. 1) to the first conference room terminal 1 through the connection 15. When the AESA of the second conference room terminal 2 is resolved by the ANS [[10]] 5 in the above-mentioned manner, the first conference room terminal 1 releases the connection 15 by the use of the signaling channel 15s.--
